## DETAILED ACTION

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-16, drawn to a method of constructing a cutting element for a drill bit including forming an attachment table and then attaching the table to the substrate, classified in class 76, subclass 108.1.
  - II. Claims 17-20, drawn to a method of constructing a cutting element for a drill bit including forming a table on the secondary substrate, classified in class 76, subclass 108.1.
  - III. Claim 21, drawn to a method of constructing a cutting element for a drill bit including the substrate having tungsten carbide, classified in class 76, subclass 108.1.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions of Groups III and I/II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). For example, the combination as claimed does not require the particulars of the subcombination as claimed because the combination can be used without forming superabrasive table on the secondary substrate as in the subcombination. The subcombination has separate utility such as it can be used without the tungsten carbide substrate.

Art Unit: 3724

3. Inventions of Groups II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). For example, the combination as claimed does not require the particulars of the subcombination as claimed because the combination can be used without forming a separate abrasive table prior to attachment to the substrate. The subcombination has separate utility such as it can be used without the step of forming a superabrasive table on the secondary substrate.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
